# AIR-FLOW AESTHETIC POLISHING

Get a fresh,  
clean, dazzling  
smile in  
minutes!

## Ask your Dentist or Hygienist for the Air-flow Treatment

Airflow treatment is a pleasant and comfortable oral cleansing therapy. It takes **just one appointment** and will leave your teeth feeling smooth clean, polished and ready to smile with confidence

### Fast Effective Stain removal

Air-Flow uses a spray of air, aesthetic polishing powder and a gentle jet stream of water to **remove surface stains** caused by tobacco, food and drink etc. You will immediately see and feel the difference.

### It's good for your health

Airflow is kind to the tooth surface: It will remove surface plaque and Biofilm (bacteria). It will significantly **improve tooth brightness** and give you a noticeably sparkling fresh healthy mouth in an instant.

### Feels and tastes great

Airflow not only feels good it tastes good too. The aesthetic polishing comes in different flavours.

### Before Air-flow Treatment

### After Air-flow treatment.

### Benefits of Air-flow treatment.

Cleaning is quicker, more thorough and gentler on the tooth surface than tooth polishing with rubber cups. Air-flow removes the biofilm that accumulates bacteria causing gingivitis and periodontitis.

### After Air-flow treatment.

After your treatment is complete, you should avoid eating, drinking or smoking for 2 hours (you can drink plain water.) Use a sensitive toothpaste as teeth may feel more sensitive after treatment.

**Air-Flow treatment is carried out by the hygienist starting from**

**£45.00**

**Book an appointment today!**
